AuroraTango

Affordable multi service test platform for rapid service deployment

Achieve greater efficiency in ADSL deployment or ISDN commissioning and maintenance - Tango saves time with organised auto-testing and report generation.

AuroraTango

- Assists Network and Service Providers to supply proven links and services of the highest quality
- Flexible use for quick service check or detailed analysis
- Repeatable automatic test procedures for accuracy
- Dual operation modes allow service verification irrespective of the technician's experience
- Modular platform provides investment security

ADSL

- Analyses the ADSL physical layer performance, statistics, error counters and trace events with a single key press
- ADI test modules for testing ADSL over POTS and ADSL over ISDN
- Alcatel test module for testing ADSL over ISDN
- IP Ping test supporting PPPoE and PPPoA connections and authentication

NEW ISDN

- ISDN BRI test module supporting S and U interface
- Verify the service characteristics with a single key press
- Automatic configuration feature to avoid unnecessary operation errors
- Manual mode for single tests and approvals
