

Trend Communications Service Testing Solutions for Triple Play

Quick Reference

Multipro

Trend Multipro is a handheld tool for time effective triple play service qualification and troubleshooting. It carries out Quality of Experience (QoE) tests that show how the customer will perceive the service by watching IP Television, making VoIP calls or browsing a remote web site with the tester.

Aurora Tango

The Aurora Tango is a modular multi-technology platform for effective testing. It can operate in both One-button and Expert mode. Adding a PDA provides a comprehensive, yet easy to use graphical interface. Swappable modules offer flexibility in testing various technologies, including ADSL2, ADS2+, SHDSL and Gigabit Ethernet.

MC2+

The MC2+ is a hand-held and battery-powered tester that enables verification of ADSL, ADSL2 and ADSL2+ interfaces in a very short time with minimum or no configuration. Using it is as simple as testing with a multimeter. The tester is designed to be carried by field technicians without worrying about having a laptop or a connection to the mains.

Acronyms

- ADSL2+:** Asymmetric DSL 2+
- DSL:** Digital Subscriber Loop
- DSLAM:** DSL Access Multiplexer
- GFP:** Generic Frame Procedure
- IPTV:** IP TeleVision
